Real-World Success With Managed Services

Bringing efficiency into your IT operations, so you can invest in your future.

Business leaders need to have one eye on today and one on tomorrow. Dealing with an ever-patchy, patchy, or charge request in important, but so are efforts to drive growth. Controlling cloud costs is as critical as using the cloud to build new services and differentiated experiences.

With Managed Services from Insight, you don’t have to choose. Gain skilled technical resources, automation and modern tool sets, and a proactive partner that works to anticipate needs before problems occur to drive continual improvements in your IT operations — and re-focus your team on strategic objectives.

Success stories

We’ve helped our Managed Services clients address a wide range of IT and infrastructure needs, across the data center and cloud. See what they’ve achieved, and what’s possible for your business.

Leading appliance repair company

Challenge: As the largest and most profitable surviving division of a corporation that recently underwent a major reorg, the company had a long list of urgent priorities. These included:
- Upgrading aging and neglected applications, operating systems, and accompanying processes
- Modernizing by migrating all workloads to the public cloud

Solution: Using our proven methodology, we helped the company assess its current IT environment, determine needs for remediation and upgrades, and develop plans for a seamless migration to cloud.

Results:
- A well-governed and cost-optimized cloud environment managed by an expert team, plus a better understanding of their IT environment and requirements, and a reenergized IT organization.

Global motion and control technology corporation

Challenge: The Fortune 250 global leader in motion technologies delivers for all sectors, including government, transportation and a variety of other verticals.

Solution: We offered several options with variations on where Microsoft Exchange could be deployed and how it could be managed.

Results:
- A complete solution built in just a couple of months, which includes a fully managed and compliant subscription model Exchange environment across three Insight data centers with 24x7 expert care.

Multinational construction company

Challenge: For years of merger and acquisition activity, the company had a large, disjointed, and aging network across 500 remote sites.

Solution: We evaluated and provided immediate remediation by their existing network structures.

Results:
- An up-to-date map of network architecture, physical connections, and traffic flows, plus a dynamic and secure network management model fully managed by a team of network and security experts.

Global travel industry leader

Challenge: Although they had an existing Security Information and Event Management (SIEM) platform and managed services provider, the company was dissatisfied with the performance of both.

Solution: We offered several options with variations on where Microsoft Exchange could be deployed and how it could be managed.

Results:
- A complete solution built in just a couple of months, which includes a fully managed and compliant subscription model Exchange environment across three Insight data centers with 24x7 expert care.

Managed Data Center

Your business can’t run without the engine of your data center. Give it the attention and care it deserves, with ongoing maintenance, patching, baseline optimization, and more.

Managed Network

Software-defined ‘flesh’ and human network services. Whether you’re operating with traditional WAN or the latest software-defined architecture, we can help you optimize it.

Managed Security

Despite having a plethora of tools, most organizations don’t have the resources to effectively manage their security.
