Business leaders need to take one eye on today and one on tomorrow. Dealing with an alert, patch, or change request is important, but so are efforts to drive growth. Controlling cloud costs is as critical as using the cloud to build new services and differentiated experiences.

With Managed Services from Insight Cloud + Data Center Transformation (CDCT), you don’t have to choose. Gain skilled technical resources, automation and modern tool sets, and a proactive partner that works to anticipate needs before problems occur to drive continual improvements in your IT operations — and refocus your team on strategic objectives.

Success stories

We helped our Managed Services clients address a wide range of IT and infrastructure needs, across the data center and cloud. See what they’ve achieved, and what’s possible for your business.

Leading appliance repair company

Challenge: As the largest and most profitable surviving division of a corporation that recently underwent a major reorg, the company had a long list of urgent priorities. These included:
- Vacating four existing data centers owned by the former parent company
- Upgrading aging and neglected applications, operating systems, and accompanying processes
- Modernizing by migrating all workloads to the public cloud

Solution: We performed an extensive discovery of the company’s business drivers and security concerns, and planned implementation of a modern cloud-native SIEM, fully managed by Insight.

Results:
- A well-governed and cost-optimized cloud environment managed by an expert team, plus a better understanding of their IT environment and requirements, and a reenergized IT organization

Global motion and control technology corporation

Challenge: The Fortune 250 global leader in motion technologies delivers for all sectors, including government, military, and commercial. Their email system, however, needed upgrading to ensure:
- That a major reorg, the company had a long list of urgent priorities. These included:
- An up-to-date map of network architecture, physical connections, and traffic flows, plus a dynamic and secure network management model fully managed by a team of network and security experts.

Managed Network

Solution: We performed an extensive discovery of the company’s business drivers and security concerns, and planned implementation of a modern cloud-native SIEM, fully managed by Insight.

Results:
- A well-governed and cost-optimized cloud environment managed by an expert team, plus a better understanding of their IT environment and requirements, and a reenergized IT organization

Global travel industry leader

Challenge: Although they had an existing Security and Information Event Management (SIEM) platform and managed services provider, the company was dissatisfied with the performance of both, specifically:
- The SIEM’s security alerts and responsiveness to incidents
- The scope and security capabilities of their existing services provider
- The stable ability to wield planned company growth

Solution: We performed an extensive discovery of the company’s business drivers and security concerns, and planned implementation of a modern cloud-native SIEM, fully managed by Insight.

Results:
- A well-governed and cost-optimized cloud environment managed by an expert team, plus a better understanding of their IT environment and requirements, and a reenergized IT organization

Managed Security

Solution: Despite having a plethora of tools, most organizations don’t have the resources to effectively manage their security. We bring your threat detection and prevention, fast incident resolution, and 24/7 service.
