

# Microsoft Securing Identities Workshop

Safeguard user identities and protect your IT environment.

## Business challenge

Identity is today's control plane for digital transformation. Organizational barriers are blurring the lines between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralized behind traditional network security. Addressing these challenges and the rising number of identity attacks diverts valuable IT time and resources away from transformation initiatives.

## Our solution

The Microsoft Securing Identities Workshop from Insight will show your IT team how to stop tomorrow's data breaches by securing your user identities today. Designed to help IT staff find identity risks occurring in your current environment, this workshop provides valuable insights about your application landscape to help improve your identity security posture.

### During the workshop, you'll learn how to:

- Get a rating of your identity security posture and see how it compares to your peers.
- Gain insights into apps used in your environment — even ones unsanctioned by IT.
- Understand how to prevent identities from being compromised.
- Learn how to reduce costs and improve business agility and security with simplified app access.

## Benefits

- Protect user identities from compromise.
- Understand your app environment.
- Create simplified app access.
- Improve overall security posture.

# Create a successful strategy for identity security.

Given the complexity of identities, data, applications and devices, it's essential to learn how to ensure the right people are accessing the right information, securely. This workshop will show your team how identity is the fundamental pillar of an integrated security philosophy and end-to-end security strategy.

**Optimize identity** — Identify potential risks related to identity and see opportunities for improvement.

**Assess security posture** — Receive a numerical rating of your identity security posture and see how it compares to similar organizations.

**Reduce costs** — Minimize expenses associated with password reset and help desk resources.

**Increase visibility** — Get a sample survey of apps your employees are using and if IT supports them.
