Starburst Presto Fast Start

Business challenge

Many enterprises face challenges when it comes to unlocking the value of data from isolated systems or data silos. Traditional approaches to unifying this data can be slow and labor-intensive, requiring significant time and engineering.

How we help

Presto[™], by Starburst, is an open source, distributed query engine that simplifies cross-data-store querying using ANSI standard SQL. Users can write and submit a single query which is then broken into a number of separate requests within the engine before results are aggregated and returned as a unified, cross-source data set.

With native connecters for a wide variety of database, NoSQL, big data and file solutions, Presto integrates easily into nearly any application or reporting tool though Open Database Connectivity (ODBC) and Java Database Connectivity (JDBC).

During this Fast Start, Insight experts will work closely with your team to rapidly ideate, design and build a demo-ready Starburst Presto Proof of Concept (PoC), demonstrating the power of Presto using your organizational systems and data.

Preparing for transformation

To ensure you receive the greatest value from this engagement, you will need:

• A suitable sandbox environment to deploy and configure Starburst Presto, on-premises or in the cloud

Duration

2–4 weeks

Benefits

- Unlock the power of data by enabling cross-source queries.
- Improve time to value for data and analytics though reduced engineering.
- Increase performance and scale by moving query compute off of critical systems.
- **Simplify migration** by creating a powerful query management tier.
- Increase optionality by enabling SQL across more storage modes.
