

1	Router/switch Modernize network infrastructure for improved functionality, security and performance.
2	Wireless networking Drive exceptional user and operational experience with seamless wireless technology, including location detection.
3	Network security Secure your networks and sensitive data against malicious attacks and internal compromise.
4	Cabling Ensure infrastructure efficiency with cabling services from survey and design to installation and remediation of all cable types.
5	Physical security Secure your physical location with connected video and physical access control systems to monitor ingress and egress.
6	Cellular enhancement Provide cost-effective indoor/outdoor RF networks with small cell technology and deliver high-powered coverage for large areas with Distributed Antenna Systems (DAS) using private LTE.
7	Point of Sale (POS) Provide a smooth checkout experience with quality POS technology and secure connectivity.
8	Signage, audio & intercom Communicate with customers and colleagues with digital signage, and audio and intercom solutions.
9	Handheld device support Implement wireless network technologies that provide the necessary connectivity for various handheld devices.
10	On-site support & managed services Relieve IT staff of day-to-day burdens and ensure smooth operations at all times with full support and managed services.
