

## Secure, scalable, remote access to the applications workers need

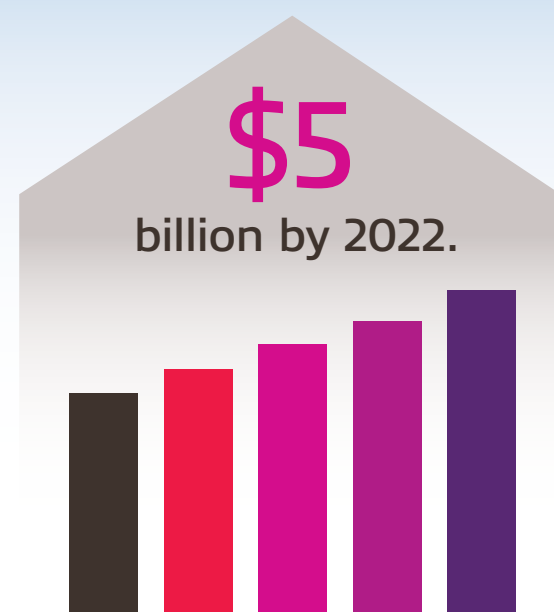

Virtual Desktop Infrastructure (VDI) solutions deliver secure virtual desktops and apps to end users, allowing workers to get the job done without coming into the office.

**60%** of executives expect to increase spending on virtual collaboration tools.

Accessing tools and documents securely is a **top 2** concern for remote workers.

**65%** of executives believe it's very important to increase employee productivity in the hybrid work setting.

In fact, VDI is so critical that experts expect the global virtual desktop market to grow to

Even so, traditional on-prem VDI requires costly infrastructure and high-cost implementation. The infrastructure and hardware can be difficult and expensive to manage and maintain, and constant updates can cause outage windows. Plus, on-prem VDI may require additional security solutions to ensure that all endpoints are secure.

Modern cloud-hosted VDI, on the other hand, provides organizations with the benefits of VDI with little to no infrastructure costs — while also allowing dynamic scaling, easy integration with security solutions and simplified management.

### Cloud VDI is great...

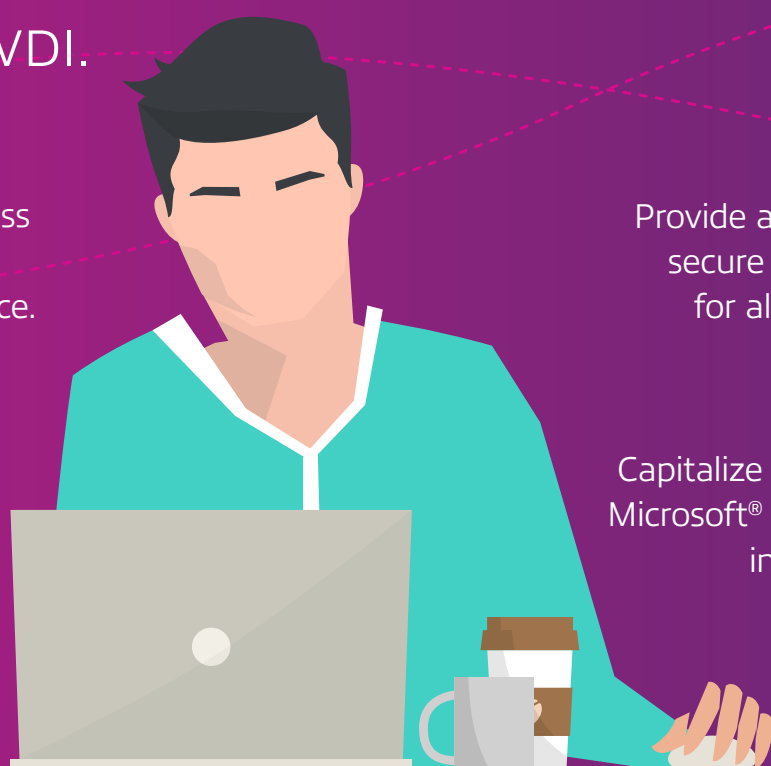

Create a modern remote environment with managed VDI.

Securely enable employees to access their desktops and applications anywhere, anytime, from any device.

Modernize existing environment with flexible, scalable, cloud-based solutions.

Provide a consistent, secure experience for all end users.

Capitalize on existing Microsoft® technology investments.

### ...but does your organization have the skills and resources to:

- 1 Support cloud infrastructure and modern VDI management tools?
- 2 Keep up with changes to ensure secure authentication and access to VDI?
- 3 Constantly monitor usage, performance and sizing?
- 4 Perform ongoing maintenance, application delivery and feature changes?

### Introducing Managed VDI from Insight

Insight Managed VDI takes the challenges out of maintaining your virtual environment by offering:

- Tool and portal management for Azure® Virtual Desktop (AVD), VMware® and Citrix® solutions
- Image management, including OS and application updates and deployment of virtual machines
- Application deployment
- User experience monitoring
- Automated processes

### How Managed VDI improves your organization's bottom line:

Reduce cost complexity with flexible monthly billing while optimizing your existing Microsoft E3/E5 investments and AVD entitlements.

Adapt to new threats with fully integrated endpoint security.

Refocus internal resources on strategic business initiatives.

Optimize performance with comprehensive monitoring and better resource management.

To learn how Insight's Managed VDI provides end users with stable, secure access to remote desktops and apps while also improving your bottom line, get in touch with an expert.
