

Solution Brief

Zero Trust Assessment

Evolving security needs

Traditional IT security is increasingly weakened by rapidly advancing technology and a growing threat of breaches. Organizations need comprehensive, sustainable protection, but existing systems with perimeter-based security are no longer reliable.

Modern solutions for business security

Zero Trust is a modern security strategy based on the following principle: Never trust, always verify. This method limits access to only those who absolutely require it to perform their jobs. With a Zero Trust architecture, businesses can protect their assets for the long run, strengthening overall cybersecurity.

With Insight's Zero Trust Assessment, we can help you:

- Gain a comprehensive understanding of your business environment with a report on the current state versus desired state.
- Acquire training on Zero Trust adoption benefits and apply the National Institute of Standards and Technology (NIST) Framework for a Zero Trust security approach.
- Identify gaps and areas for improvement based on the Zero Trust architecture.
- Review recommendations to improve Zero Trust maturity level with identified next steps.

Service details

Our team starts with interactive stakeholder meetings addressing the five pillars of Zero Trust. Next, our security engineers conduct an evaluation report identifying areas of improvement. Then we have a review session where we provide recommendations for actions and identified next steps.

Zero Trust architecture outcomes

- + Reduce security threat exposure.
- + Minimize lateral movement of attacks.
- + Improve threat visibility and response.
- + Facilitate governance and compliance.

Zero Trust architecture

Zero Trust tenants	Assume breach	Never trust, always verify	Least privilege
Zero Trust pillars	User and identity	Continuous authentication Authorization & monitoring Access governance Protect & secure all interactions	
	Devices	Identify Authenticate Authorize Inventory Isolate Secure Control & remediate all devices	
	Network	Segment Isolate Control network environment Implement granular access & policy restrictions	
	Applications & workloads	Application segmentation API security DevSecOps Run-time application security CASB CWPP	
	Data	Classify Discover Categorize Encrypt data Implement DRM & DLP	
Zero Trust compliance operations	Visibility & analytics	Detect anomalous behavior Make dynamic policy changes Provide real-time access decisions	
	Automation & orchestration	Automate security processes & responses Integrate SIEM Enable SOAR	
Continuous reiteration			

Why Insight for Zero Trust

- Our team performs a thorough assessment to better understand our client's unique environment in order to recommend a personalized, sustainable security solution.
- We provide comprehensive services across key areas of technology to meet our client's needs.
- We have strong partnerships across leading technologies in the industry.
- We have more than 20 years of security services experience and teams who are CISSP-, CCIE- and QSA-certified.
- We are compliant with standards such as PCI, HIPAA/HITRUST, ISO 2700X, NIST, CMMC (DoD) and GDPR.

Driving innovation with digital transformation

At Insight, we help clients enable innovation with an approach that spans people, processes and technologies. We believe the best path to digital transformation is integrative, responsive and proactively aligned to industry demands. Our client-focused approach delivers best-fit solutions across a scope of services, including the modern workplace, modern applications, modern infrastructures, the intelligent edge, cybersecurity, and data and AI.
