

Improving Cybersecurity Before, During, and After an Event

Understanding the growing threat of cyberattacks

33 billion records will be stolen annually by 2023

Nearly **6 organizations per minute** will fall victim to ransomware in 2021

Only **36%** of IT leaders say their organization is prepared to respond to a data breach

Gartner analysis of clients' ransomware preparedness shows that over **90%** of ransomware attacks are preventable.*

146 billion records will be exposed in data breaches from 2018–2023

Understanding the 3 phases of incident response

Given the prevalence and magnitude of today's cybersecurity threats, most organizations need professional support for reducing incidents, identifying and containing threats, and quickly restoring business to normal operations after an event.

Incident Response services from Insight provide effective strategies for every phase of response with services aligned with the National Institute of Standards and Technology (NIST) framework.

Phase 1: Preparation

Optimize your security environment

Profiler plus identifies opportunities for standardization and optimization, outlined in a remediation roadmap deliverable.

Develop an effective plan

Incident response planning experts collaborate with you to create a customized, actionable incident response plan.

Test and train

Tabletop exercises increase your readiness and test your incident response plan through site or remote simulations.

Secure support for future events

Emergency Incident Response Retainer (EIRR) gives you priority access to Insight's incident response experts when an event occurs.

Phase 2: Incident management

Disable latent threats

Focused threat hunting identifies and resolves ongoing compromises within the security environment.

Remediate threats swiftly and skillfully

Emergency Incident Response (EIR) provides fast, expert support for threat containment and remediation, with recommendations provided in a final deliverable.

Phase 3: Post incident

Reset and reinforce the security environment

Event remediation support identifies and implements solutions for improved security posture.

Manage and monitor security systems

Managed Security services support your teams with skillful system maintenance for ongoing protection and peace of mind.

Evaluate response performance

Lessons learned exercises evaluate an incident retroactively and provide a summary report deliverable to inform future improvements.

Evolve the security environment

Post incident gap remediation reactively addresses gaps in your security environment with expert support for technology selection, implementation, and deployment.

Reduce incidents and restore normal operations with Insight

Insight leverages expertise in incident and threat management, security consulting and solutions, managed services, and more to help our clients minimize and mitigate the threat of cyberattacks. Our globally coordinated team of certified security professionals administers services in alignment with the NIST framework and will help your organization develop critical audit and board-ready collateral.

To learn more about how our comprehensive and flexible solutions can help you achieve a security posture, read the **Incident Response Services solution brief**.
