Ransomware Prevention and Recovery

Supporting your business from risk mitigation to incident response

Your data is valuable — and cyberattackers know it. The threat of ransomware has increased exponentially in recent years, and no business is safe. Security and IT teams need to have strategies, tools, and plans in place to ensure the utmost readiness.

How do you know you’re prepared? Ask the following questions of your business:

- Have you implemented specific solutions or tactics to address the threat of ransomware?
- Are you maximizing the security capabilities of existing infrastructure and systems?
- Are your backups on a modern data protection platform and on systems protected from ransomware?
- Are you able to recover your whole environment — not just files or systems — in hours?
- Do you have a written plan for responding to an attack if it were to occur? How often do you test this plan?

As a business leader, it can be difficult to ascertain organizational readiness with an objective point of view. Even more challenging is staying up to date on ever-evolving security best practices and understanding which solutions are worth your investment.

Insight Cloud + Data Center Transformation (CDCT) delivers complete ransomware response using a multilayered approach to help you minimize the risk of an attack and recover quickly after an event.

Why Insight

25+ years
of data center experience

16 years
of incident and threat management experience

14 years
of penetration testing, vulnerability assessment, and security management

100+
data protection projects a year

300+
network projects a year

40+
microsegmentation projects a year

Our services encompass:

- Network enhancements and segmentation
- Endpoint protection and end-user awareness
- URL filtering and other access controls
- Data protection for data across the IT environment
- Backup capabilities aligned with business continuity requirements

Across your IT environment

Identity  Endpoints and devices  Network  Infrastructure
Where to start
Our team is here for you, whether you need to build a security program from scratch, modernize your backup infrastructure, or manage a recent cybersecurity event.

Data Protection Assessment
IT environments today are typically complex and multiplatform, making data protection a less-than-straightforward exercise. During our Data Protection Assessment, we evaluate your existing systems and capabilities, identify bottlenecks and architectural issues, and provide a roadmap for change inclusive of cost analysis so that you understand exactly what’s needed to improve your stance.

Incident Response services
Our Incident Response services are a combination of consulting and professional security services that enable effective proactive and reactive response. We can help you develop a fail-proof plan for responding to cybersecurity attacks that minimizes damage and accelerates recovery. And in the unfortunate event that your organization has suffered a successful cybersecurity attack, our team can be your first call.

Security services
We’ve helped organizations secure their data and networks for more than 30 years. Our services span governance, risk, and compliance; cloud security, testing and assessment, and security controls, and align with industry standard framework NIST. We take a holistic approach that brings together the best practices, technologies, and strategies for mitigating risk and protecting your organization.

Meaningful solutions driving business outcomes
We help our clients modernize and secure critical platforms to transform IT. We believe data is a key driver, hybrid models are accelerators, and secure networks are well integrated. Our end-to-end services empower companies to effectively leverage technology solutions to overcome challenges, support growth and innovation, reduce risk, and transform the business.
