Security Strategy Workshop

A review and roadmap process that puts you on the path to more effective security

The Security Strategy Workshop is a collaborative process that brings together your knowledge of your business objectives and current security practices with our in-depth understanding of the most current security technology, processes, and best practices. The result is a roadmap for implementing the ideal security measures for your environment.

Insightful security surveys

In order to help you develop a security strategy that will protect your organization going forward, we need to understand exactly where you are today. To that end, we create and administer two surveys for your staff: one for your business units and the other for security stakeholders. The results from these surveys are compiled, and then presented at the workshop. This security baseline plays a major role in shaping your new security measures.

A proven process

The time-tested methodology we use to prepare for and conduct your workshop is made up of eight steps.

1. **Survey business units** to gather insight on your assets, directives, and perception of the company’s security posture.

2. **Survey security stakeholders** to understand the risks you are charged with mitigating and the initiatives that are planned or underway.

3. **Align** business and security objectives.

4. **Prioritize** security initiatives based on security team input.

5. **Understand** the skills staff members need to manage current and future initiatives.

6. **Evaluate** operational processes to identify where security gaps exist.

7. **Define** current technology capabilities and uncover security gaps.

8. **Provide** a clear, concise explanation to company executives of current state vs. desired state, and how the desired state produces value and helps the organization meet business objectives.
Deliverables that deliver
A workshop is only as valuable as the actionable insights it provides. From the executive overview and survey results, to a Security Strategy Dashboard, Security Scorecard, and detailed Security Strategy Roadmap, every item we develop in your workshop is purpose-built to assist you in defining or refining your security measures.

Next steps to better security
At the conclusion of the Security Strategy Workshop, your organization is well-positioned to make significant improvements to the security of your data and network. Should you choose to have our assistance in implementing your new security measures, the cost of the workshop is applied to follow-on services.

Why Insight CDCT

- **Extensive experience**
  We have a track record of success in securing complex enterprise environments while minimizing disruption so you can continue to work efficiently.

- **An extension of your staff**
  Leveraging our security expertise frees up your staff to tackle other projects.

- **Comprehensive service**
  From architecting solutions and selecting technology, to supporting the products, processes, and people that make up your defenses, we handle all aspects of your security.

- **Solution agnostic**
  We craft a comprehensive security solution for your business using ideally suited offerings from a wide range of leading providers.

Meaningful solutions driving business outcomes
We help our clients modernize and secure critical platforms to transform IT. We believe data is a key driver, hybrid models are accelerators, and secure networks are well integrated. Our end-to-end services empower companies to effectively leverage technology solutions to overcome challenges, support growth and innovation, reduce risk, and transform the business.
