

Microsoft Sentinel Workshop

Gain a bird's-eye view across your enterprise with SIEM for a modern world.

Business challenge

As IT becomes more strategic, the importance of security grows daily. Security Information and Event Management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges — let alone tomorrow's unimagined risks.

That's why Microsoft developed Sentinel™, a fully cloud-native SIEM. Microsoft® Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting and threat response.

Our solution

Get an overview of Microsoft Sentinel along with insights on active threats to your Microsoft 365™ cloud and on-premises environments with a Microsoft Sentinel workshop.

Through this workshop, we will work with you to:

- Discover threats to your Microsoft 365 cloud and on-premises environments across email, identity and data.
- Understand how to mitigate threats by showing how Microsoft 365 and Azure® security products can help mitigate and protect against threats that are found.
- Plan next steps and provide information to build a business case for a production deployment of Microsoft Sentinel, including a technical deployment roadmap.

In addition, depending on the selected scenario, you will also:

Experience the benefits of a managed SIEM with a true cloud-native SIEM, managed and monitored by our cybersecurity experts (remote monitoring).

Receive hands-on experience, learn how to discover and analyze threats using Microsoft Sentinel and how to automate your security operations to make them more effective (joint threat exploration).

Benefits

- Understand the features and benefits of Microsoft Sentinel.
- Gain visibility into threats across email, identity and data.
- Better understand, prioritize and mitigate potential threat vectors.
- Create a defined deployment roadmap based on your environment and goals.
- Develop joint plans and next steps.

What we'll do

Working with your teams, Insight will help your organization strengthen your approach to Microsoft Sentinel™ and start to make the most of SIEM in your environment.

Analyze your requirements and priorities for a SIEM deployment.

Define scope and deploy Microsoft® Sentinel in your production environment.

Provide remote monitoring* and proactive threat hunting to discover attack indicators.

Discover threats and demonstrate how to automate responses.

Recommend next steps on how to proceed with a production implementation of Microsoft Sentinel.
