

Red Hat Ansible Automation Platform

Seamless automation for Cisco infrastructure

Business challenge

While networking technologies have evolved significantly in recent years, management has stayed mostly unchanged. Legacy network management relies heavily on manual processes, which can be slow, error-prone and unable to keep pace with rapidly changing business and customer requirements.

Organizations need to be able to respond faster than ever, making automation essential to a modern network management strategy. And yet, many organizations fail to adopt automation at a competitive pace, lacking insight for how to move forward.

Our solution

Network automation enables organizations to reduce time spent on management, improve security and reduce the likelihood of manual errors, resulting in stronger business outcomes.

For organizations already using Cisco® networking technologies, Red Hat's Ansible® Automation Platform, delivered by Insight, offers a seamless way to automate that network infrastructure. Programmable logic enables network resource management and services with rapid configuration, scale, security and integration. With Ansible Automation Platform, network operations (NetOps) teams can respond quickly to changing workload requirements while ensuring corporate policies are satisfied.

Streamline network management operations.

Improve your team's ability to respond rapidly.

Identify and address security vulnerabilities.

Ensure continuous compliance with policies and regulations.

Increase network resiliency through effective testing.

Benefits

- + Improve IT service reliability.
- + Enhance IT service delivery efficiency.
- + Drive network cost savings.
- + Reduce manual IT burden.
- + Mitigate risks and support recovery.

Service capabilities

- Infrastructure Automation Readiness Workshop
- Ansible implementation
 - Fast Start implementation or custom SOW
- Ansible Playbook customization and optimization
- Infrastructure as Code (IaC) libraries and deployments
- Satellite implementation and deployment

Insight, Red Hat and Cisco for modern networks

Red Hat and Cisco work together to deliver the platforms and integrations needed to support efficient, automated network operations. With solutions built to provide exceptional support for Cisco infrastructure, Red Hat allows organizations to easily streamline network management with continuous compliance and improved responsiveness and resiliency.

Insight is a top partner for both Red Hat® and Cisco solutions. For decades, we've partnered with the industry's leading network technology providers, enabling seamless infrastructure transformation with deep networking expertise and comprehensive support for everything from adoption and implementation to management and optimization.
