

Solution Brief

Services for Google Cloud Platform

Meet your business challenges head-on with Insight and cloud computing services from Google.

The cloud can be a critical tool in increasing agility and driving innovation. No matter which cloud you use, Insight can help you with all phases of aligning, migrating, securing, and managing your workloads.

There are many use cases where Google Cloud will be the right choice. Its secure infrastructure delivers high performance, in conjunction with powerful data and analytics, enabling you to find answers faster and build better products. And a serverless cloud with just code lets you grow from prototype to production to global-scale without having to think about capacity or reliability.

Insight has deep experience and expertise in modernizing and transforming applications, platforms, IT operations, and security in hybrid and multicloud environments for organizations running in Google Cloud.

What we deliver:

Initial assessments and strategic support

- Discovery and analysis with SnapStart engine
- Workload assessments
- Baseline infrastructure assessments
- Application profiling and dependency mapping
- Future state architecture mapping

Back up to Google Cloud

Ensure your data is protected and available to support the needs of your business. We can help you determine the suitability of Google Cloud as a backup target, identify complementary technology solutions, and implement all changes within your IT environment.

Lift and shift VM migration service

We help you migrate Virtual Machine (VM) instances at scale from on-premises infrastructure or from other public clouds to Google Cloud.

- Economic assessment
- Workload alignment
- Establish governance and Identity and Access Management (IAM) strategy
- Plan for operations (monitoring, management)
- Design and execute migration

Migrate to Anthos service

Our team helps you migrate and convert workloads directly into containers in Google Kubernetes Engine. Target workloads can include physical servers and VMs running on-premises, in Compute Engine, or in other clouds.

- Identify target workloads
- Upgrade to containers
- Leverage managed service and other cloud-native tools

Data management service

Manage your Google Cloud data and take advantage of advanced data analytics and intelligence resources.

- Build a strong data foundation on your path to AI and machine learning
- Create data warehouses that support greater business intelligence
- Automate data delivery and democratize data insights

Security services

We help you establish and operationalize a modern security program to span your cloud and on-premises environments.

- IAM and Active Directory® integration
- Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) security
- Security in DevOps
- Governance, Risk, and Compliance (GRC)

Driving innovation with digital transformation

At Insight, we help clients enable innovation with an approach that spans people, processes, and technologies. We believe the best path to digital transformation is integrative, responsive, and proactively aligned to industry demands. Our client-focused approach delivers best-fit solutions across a scope of services, including the modern workplace, modern applications, modern infrastructures, the intelligent edge, cybersecurity, and data and AI.
