

Microsoft Endpoint Management Workshop

Manage and protect Microsoft devices, apps and users.

Business challenge

Today's users need to remain productive while working on the devices they choose. A growing number of organizations allow personal devices in the workspace, which increases employee engagement and satisfaction but causes significant management challenges for IT staff. Each device represents the potential for additional risk, especially when you consider how frequently people misplace smartphones.

IT staff must be able to efficiently and effectively manage all devices connected to the network, providing secure, reliable access to mission-critical apps and platforms without opening the business up to attack or data breach.

Our solution

Modern device management represents a wide range of IT functions, including user protection, deploying new devices and refreshing old ones, managed applications, end-user support and rolling out new capabilities. Insight's Microsoft Endpoint Management Workshop equips IT staff to enable their users to be productive, on any device, without compromising IT security.

This workshop will show you how to leverage intelligent security, risk-based controls, zero-touch provisioning, advanced analytics and deep integration with the Microsoft® products you already use.

During the workshop, you'll learn how to:

- Improve your Secure Score with Microsoft Endpoint Manager.
- Learn how to build management policies that protect users, company data and devices.
- Gain insights about your users' endpoints and their compliance with IT policies.
- Determine the best way to give users access to apps on devices of their choosing.
